

# Why Linux Kicks A\$\$

- **Free**
- **Live CD/USB Installation**
  - easily boot your fav
  - convert non-believers
  - test requirements
  - fix broken computers
- **Security of Installing Programs**
  - all programs are in one place
  - because open source, millions of nerds scour code which means no root-killed (malware) software
- **Works on ANY platforms**
- **Constantly Updated**
  - usually every 6-9 months vs Windows Vista took 5 years
- **Power of Community**
  - ubuntu always rebases with debian
  - committee votes using schulze method (poll method vs pick n choose)
  - constitution written
- **Multiple Desktops**
  - switch between various programs
  - good for slacking off and not getting caught
- **Independent Distributions (packages of diff software)**
  - totally customizable
  - no big wig telling you what you want
  - pink windows, cute browser, awesome music player...
  - arch = pick-n'-choose
- **Drivers Included**
  - huge push of drivers installed with kernel
  - plug in phone, mouse, harddrive, keyboard + no waiting to install driver
- **Not Selfish**
  - linux doesn't give an f if other os are installed
  - windows only wants itself
  - windows needs to be installed first, then linux, otherwise ignores linux
- **No Reinstallation**
  - wanna upgrade from vista to windows 7? well too bad, you have to reinstall
  - linux doesn't give an f

The penguin is the only species that is not human that can successfully control a continent
